

WATER STEWARDSHIP COMMITMENT

At VINA-BAT Joint Venture Company Limited (*VINA-BAT*), we believe that access to water is a fundamental human right. Everyone, everywhere, should have access to clean and safe water.

Water is a precious resource that must be shared and sustainably managed by all stakeholders within the river basins where they live and operate. This principle lies at the heart of water stewardship. We recognize the water-related challenges in our region and firmly believe that only through close collaboration with the community can we effectively address these issues.

With a holistic approach to water management, we are committed to ensuring that water use is socially equitable, environmentally sustainable, and economically beneficial.

We focus our resources on four key areas: (i) continuously improving water use efficiency at our manufacturing sites and in the communities where we operate; (ii) collaborating with partners to protect water resources throughout our supply chain; (iii) identifying and addressing water-related risks that may impact our raw material supply; and (iv) expanding access to clean water and sanitation for local communities.

We are committed to the following actions:

- VINA-BAT will implement and disclose progress on water stewardship program(s) to achieve improvements in AWS water stewardship outcomes
- VINA-BAT implementation will be aligned to and in support of existing catchment sustainability plans
- VINA-BAT's stakeholders will be engaged in an open and transparent way
- VINA-BAT will allocate resources to implement the Standard accordingly

At VINA-BAT, we deeply value water as an essential resource. We are committed to working hand in hand with the community to manage water efficiently, in order to protect and sustain life for future generations.
